Art Unit: 1714

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 4-27 and 9-53 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Smith et al, US Patent No. 5,932,309.

Smith discloses a composite material which is a fiber having essentially the same composition as applicant's compositions and materials. The Smith et al composite includes a solid first matrix component having a particle scattering colorant and a solid second matrix component having a colorant wherein the average refractive index of the of the first particle differs from that of the matrix by at least 5% which corresponds to applicants lower limit of 0.01 as a difference in refractive index. The particle size of the colorant ranges from 0.01 to 0.4 microns. The matrix may be polyester and the compositions may additionally comprise a metal oxide. See claims 1, 5, 6, 7 and 15. Because the components of the patented invention are essentially the same as applicant's, their concurrent functions are considered to be essentially the same. This would include aspect ratio and reflection capabilities.

No patentable difference is readily ascertained.

3. Claims 3 and 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 54-74 appear to be allowable
